AI Software Engineer

Peter Ibikunle | ibikunlepeter@gmail.com | https://www.linkedin.com/in/ibikunlepeter

Professional profile

Python software engineer with 14 years of experience building web applications, APIs and data systems with hands-on delivery of AI products in production. I design, prototype and ship AI-driven applications end to end, including retrieval-augmented generation (RAG), self-hosted embedding services and multi-model AI workflows. I work well autonomously and with non-technical stakeholders, document what I build, and have mentored interns, junior colleagues and students. Currently building and running two live AI-enabled platforms.

Key skills

- **AI and machine learning:** RAG pipelines, embedding models (self-hosted), prompt and multi-model design, AI-assisted comment analysis, MCP integration for AI agents, cost and latency optimisation
- **Languages and frameworks:** Python, FastAPI, SQL, JavaScript, TypeScript, PHP
- **Data:** PostgreSQL, MySQL, ETL workflows, Power BI, data management strategy
- **Deployment and operations:** CI/CD (GitHub Actions, Jenkins, Coolify), Docker, VPS hosting, Sentry error monitoring, PostHog product analytics
- **Engineering practice:** version control (Git), code review, testing, clear technical documentation, secure API design
- **Ways of working:** autonomous delivery from concept to production, stakeholder engagement, coaching and mentoring, cross-functional collaboration

Experience

Founder and Lead Developer - Bridge44 | January 2026 – present

Social media management platform covering comment-to-DM automation, scheduling and a unified inbox across Instagram, Facebook and Threads.

- Designed and built the Python back end in FastAPI with PostgreSQL, integrating securely with Meta's official API and handling expiring access tokens, rate limits and webhooks.
- Built AI features including comment analysis and multi-turn conversation handling, using a two-model approach to keep AI cost predictable.
- Built an MCP interface so AI agents can use the platform's automation features directly.
- Run releases through CI/CD pipelines (moved from Jenkins to Coolify, also experienced with GitHub Actions) and monitor with Sentry and PostHog.
- Traced a production error spike to a token-refresh handler that ran after expiry rather than before, fixed it, and brought errors down.

Founder and AI Software Engineer - WitsWriter | March 2025 – present

AI-powered research and document platform.

- Designed and delivered the platform from prototype to production, using retrieval-augmented generation (RAG) to answer questions over users' own documents.
- Deployed a self-hosted embedding model as a separate service, which reduced reliance on external AI APIs and cut running costs.
- Built the Python back end and separated embedding, retrieval and application layers so each can be scaled and changed independently.
- Monitor production with Sentry and improve the system continuously using error data and usage analytics.
- Maintain technical documentation for the architecture and deployment process.

Development Analyst - DAWN Commission | January 2016 – January 2022

Responsible for data management and the organisation's technology infrastructure.

- Led development of a project tracker system, coaching an intern through design and delivery.
- Designed and ran ETL workflows that streamlined data integration and improved operational efficiency; used Power BI to turn raw data into reports for decision-makers.
- Led development of a regional data management strategy, adopted by six states through their coordinating Ministries.
- Worked with State and non-State development partners, presenting data through Power BI reporting to support collaboration and project success.
- Redesigned the commission's website, acted as the main point of contact for IT issues, and mentored junior colleagues.

Freelance Software Developer | October 2012 – present

- Built websites and web applications for clients using HTML, CSS, JavaScript, jQuery, AJAX, PHP and MySQL, working with other developers and designers.
- Handled client enquiries, requirements and delivery from first contact to launch.
- Taught and mentored students in dynamic website development.

Education

- **MSc Computer Science**, Swansea University, 2022 – 2023
- **MSc Statistics**, University of Ibadan, March 2021
- **BTech Statistics**, Ladoke Akintola University of Technology, April 2014

Other projects

- Back-end developer, web-based Hospital Management System
- Conversational user interface in healthcare (MSc project)
